CHEMFEED 0057	HC-3340 HIGH CAPACITY FEEDER (332K)	249.78

OFF LINE FEEDER INSTALLATIONS

Models HC 3315, HC3330 & HC 3340 are designed for hard plumbing installations using 1" PVC pipe and include standard threaded inlet and outlet fittings. They operate by pressure differential which circulates water through the feeder. The INLET control valve side of the feeder connects to plumbing on the discharge side of the pump before the filter. The OUTLET side of the feeder connects to pool return line AFTER the filter and/or heater, pool cleaner, diverter valves or any other installed piece of equipment.

A corrosion resistant check valve such as Rainbow's #172288 is recommended be installed between feeder outlet and the equipment to check back flow of chemicals. Helps prevent corrosion problems and equipment damage.

SALT CHLORINE GENERATOR

CHLORINE GENERATION

The system requires a low concentration of dissolved salt (sodium chloride) in the pool water. This level is normally below the taste threshold. The Pool Pilot automatically converts the salt into free chlorine, which keeps your pool sanitized and algae free. The chlorine reverts back to a salt after treating the water. Since the salt is constantly recycled, there is minimal loss during a swimming season. However, salt can be lost due to filter backwash, rain water overflow, leaks, or bather splashing/carryout, but not through evaporation.

The Pool Pilot Control Unit is designed to handle the purification needs of residential and commercial swimming pools. The cell must be properly sized according to the chlorine requirements. The amount of chlorine required for proper sanitization will vary based on the pool size and various factors such as water temperature, bather load, exposure to direct sunlight, special water features, and pump runtime, particularly in commercial applications.

ABOUT STAINLESS STEEL

The halogen salts normally used for pool sterilization, chiefly chlorine and bromine, are the most active agents that attack stainless steel. The heat and humidity add to the activity of these attacking compounds.

3-BEND STANDARD HANDRAILS

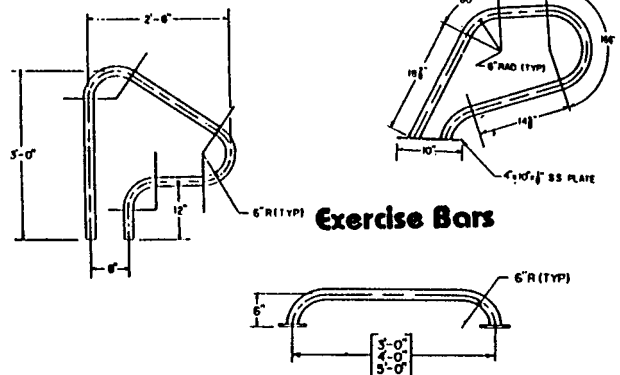

Handrails are made of 1.90" O.D. x .049" wall, 304 stainless steel tube with mirror finish. Custom dimension handrails available on a special order basis.

PREVENTATIVE MAINTENANCE

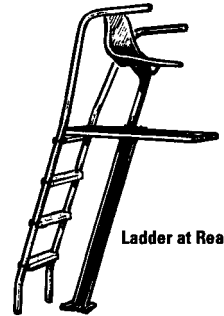

1. Wash your equipment frequently with fresh water and dry with cloth.
2. Inspect your equipment frequently. Take notice if there is any discoloration or water stains. If there is, the frequency of rinsing the equipment should be increased.
3. Never use steel wool for cleaning or cleaners with harsh abrasives.
4. Stainless steel may rust, however it should rust less than other products.

STARTING PLATFORMS AND ANCHORS

MANY STYLES AND SIZES AVAILABLE. PLEASE CALL FOR INFORMATION AND PRICING.

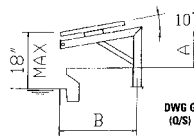

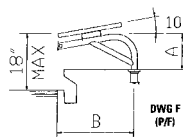

Varsity Low Height Starting Platforms: up to 18" above water
For Water Depth 3'-6" to Less Than 4'

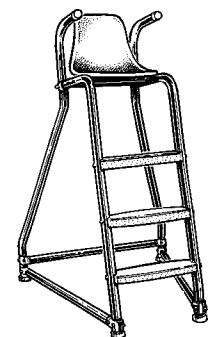

Varsity Standard Model (Low Height)

Designed to accommodate the ruling by NFHS where the take-off height is 18" above water. Fits most pools except those with unusual features. B dimension varies

with platform height. P/F uses anchor I.D. No. 22201.* Q/S uses anchor I.D. No. 23301.
Spec. Sheet Paraflyte SP 10.61
Spec. Sheet Quickset SP 10.63

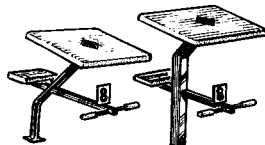

Moveable

PORTABLE

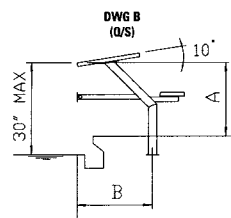

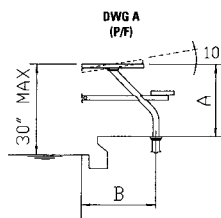

Full Height Starting Platforms: up to 30" above water

For Water Depth 4' or Over

Standard Model (Full Height)

Fits most pools except those with unusual features. B dimension varies with platform height. P/F uses anchor I.D. No. 22201; Q/S uses anchor I.D. No. 23301.
Spec. Sheet SP 10.51

Shortee Model (Full Height) (Not shown.)

For pools where the distance from deck to water exceeds 12". The Shortee Model is similar in design to the Standard Model (Dwgs. A & B opposite) but without a step and with a fixed B dimension of 18".
Spec. Sheet SP 10.57
